

SAP BI MEETS FIORI

What challenge may we solve for you with SAP Fiori?

For you as our client, SAP Fiori is the modern, high-performant and user-friendly interface to a complex BI – BI meets Fiori.

Why SAP Fiori?

- Starting with S4 / HANA, SAP recommends SAPUI5/Fiori as UI **standard technology** for future app development.
- The Fiori launchpad offers **improved user productivity by simplifying and automating daily tasks** across any mobile device.
- User acceptance** is increased with an appealing UX design.
- SAP Fiori provides **lower training and support costs** with simple, roll-based screens.

We connect SAP BI applications with SAP Fiori: The Inspiricon Toolbox

The Inspiricon Toolbox is a way to demonstrate how SAP Fiori works on some real business cases and which is the latest state-of-art of this tool. It is a suite of applications created based on the new architecture recommended by SAP. SAP Fiori and SAP Fiori apps can be individually customized to your request thanks to its multiple possibilities:

Manage Users: Easy master data management

You are able to do all CRUDs on a DSO in this application:

- Overview on all users (table view)
- Edit users: delete, update, create
- Filter
- Search

Click [here](#) for more information on SAP Fiori!

Time Tracker: Time registration

In this scenario we assume that the time registration/planning tools is based on SAP BW. User entries are done by using Excel (input-ready queries). We build a Fiori application as option which facilitates data entries as well as working on mobile devices:

- The planning cube that is currently saving the data remains unchanged
- A web service was built for all existing input-ready queries
- Several Fiori applications were developed in order to cover all required business processes: planning, time registration, approval

This approach is especially interesting if the data is being processed directly on site, on premise

BW Query Runner: Generating reports with one click

- The app is using existing queries out of the BW system.
- It scores with a clear UI, enhanced graphical visualizations, sorting and filter possibilities and many more.

Contact us today to arrange a personal SAP Fiori Demo and to discuss your requests.
